# What you need to get...

- ❑ **Shibboleth Install Package:**

<http://www.switch.ch/aai/docs/shibboleth/internet2/1.2/>

- ❑ **Sample configuration files for SWITCHaai**

<http://www.switch.ch/aai/docs/shibboleth/SWITCH/1.2/>

- ❑ **SWITCHpki certificate for your Web Server**

<http://www.switch.ch/aai/certificates.html>

## ❑ shibboleth.switchhai.xml

### ❑ Identifier in <Applications>

providerId=urn:mace:switch.ch:SWITCHhai:pilot:{HOSTNAME}

### ❑ SWITCHpki Server Certificate Location in <Credentials>

/etc/apache/ssl.key/{HOSTNAME}.key

/etc/apache/ssl.crt/{HOSTNAME}.crt

### ❑ Error Pages Customization in <Errors>

supportContact={CONTACT\_EMAIL}

HTML pages, logo and stylesheet

### ❑ SWITCHhai Federation Metadata

{FederationProvider} for sites.switchhai.xml

{TrustProvider} for trust.switchhai.xml

{AAPProvider} for AAP.switchhai.xml

- ❑ IIS specific settings in shibboleth.xml
  - ❑ Protected Web Locations in <RequestMapProvider> (Access Rules Configuration)
  - ❑ IIS Site ID Mapping in <Implementation>

## □ SWITCHai Federation Metadata

- Accepted Certification Authority certificates within SWITCHai

⇒ trust.xml

- Home Organizations participating within SWITCHai

⇒ sites.xml

- More information:

<http://www.switch.ch/aai/metadata.html>

<http://www.switch.ch/aai/ca-acceptance-policy.html>

## ❑ Siteresh

- ❑ Shell script (Standard Linux shell / Windows Cygwin)
- ❑ Automatical updates of the Federation Metadata (sites.xml / trust.xml)
- ❑ Security given by verification of the files' signatures

## ❑ Get the script and documentation:

<http://www.switch.ch/aai/siteresh.html>

# SWITCH

The Swiss Education & Research Network

## Authorization with Apache

Patrik Schnellmann, <[schnellmann@switch.ch](mailto:schnellmann@switch.ch)>

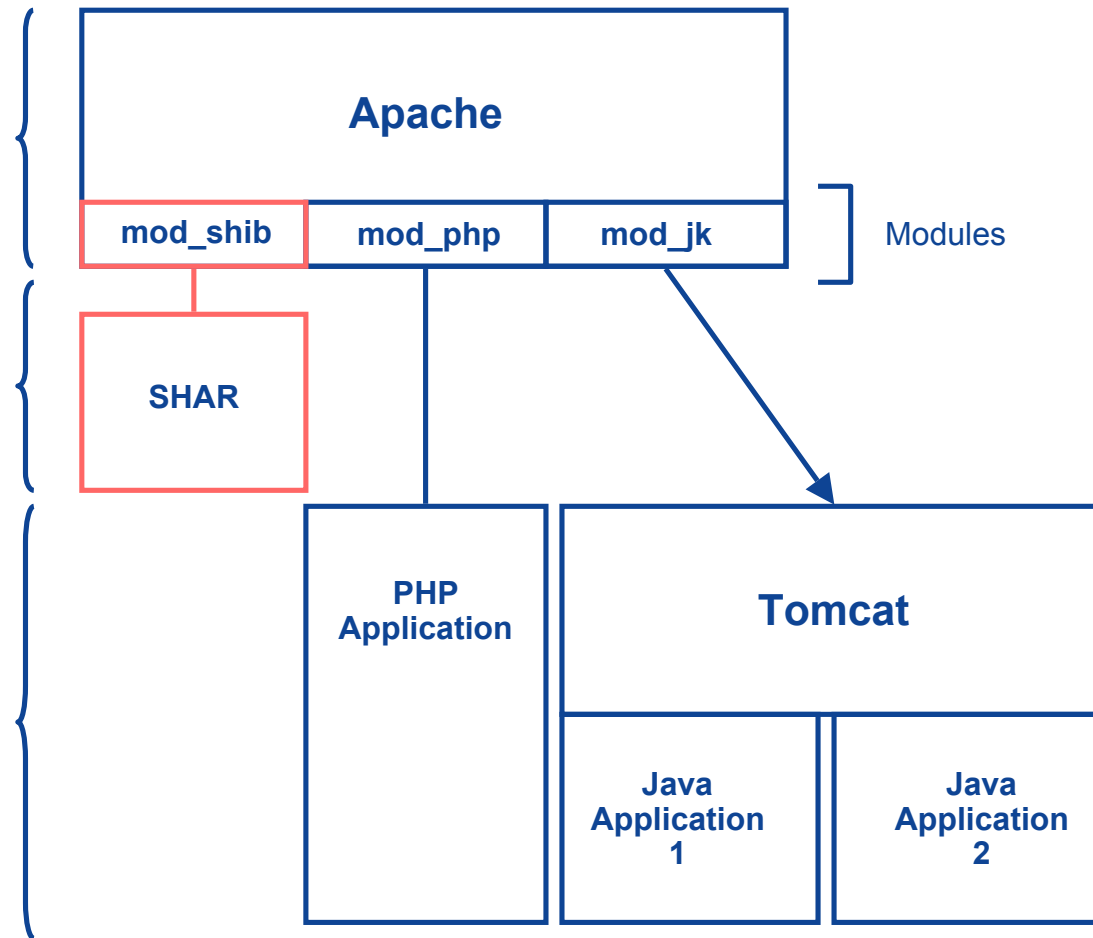

# Apache Software Components

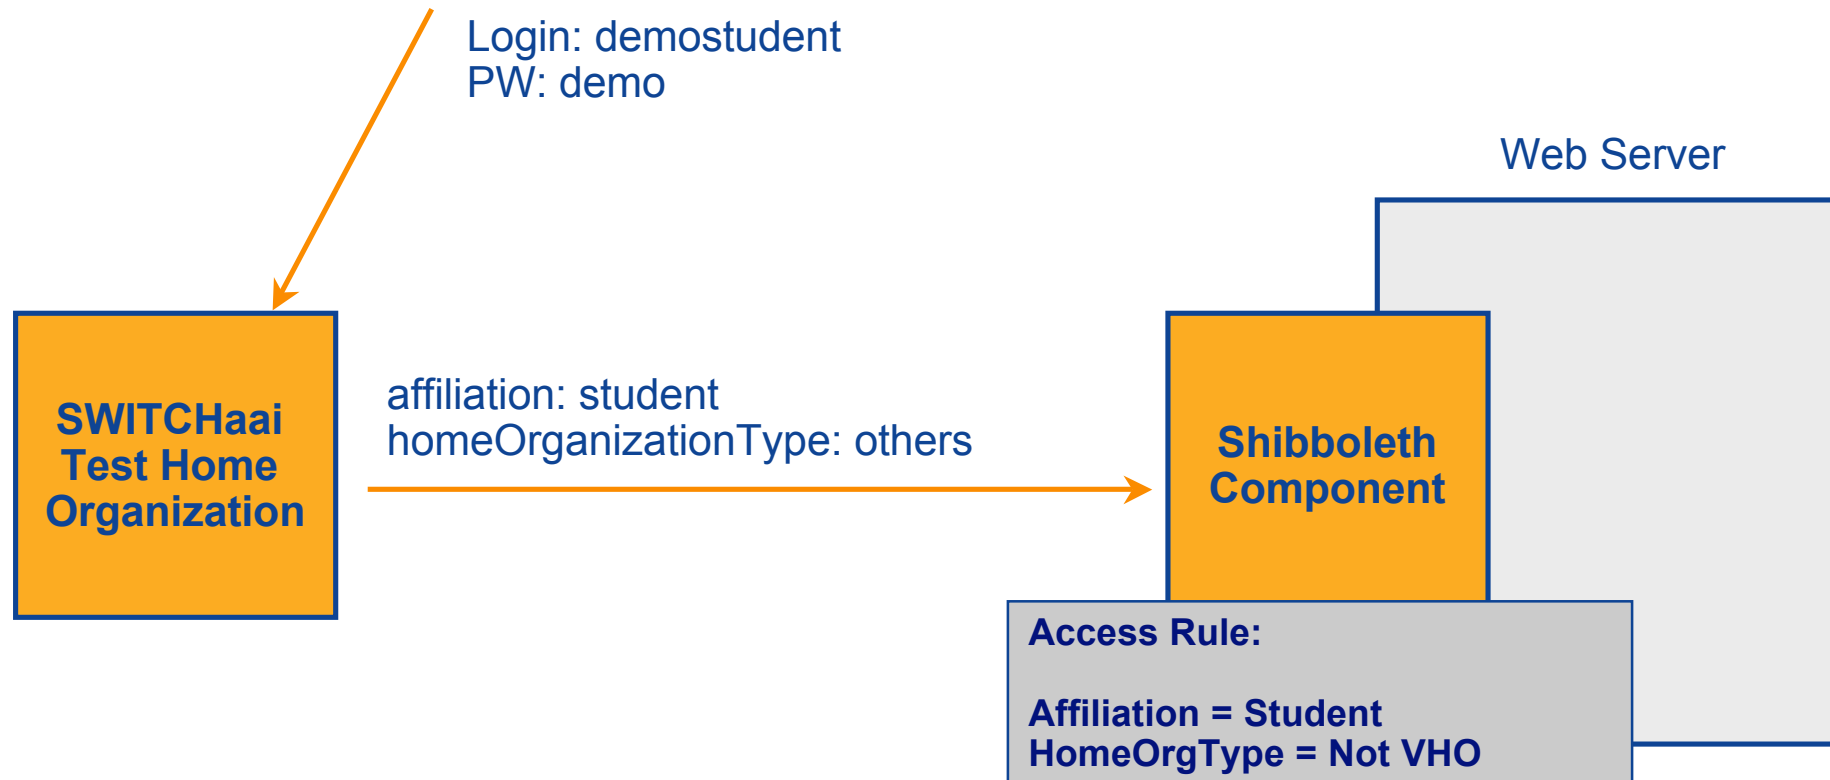

- Apache Webserver
- Shibboleth Target (mod\_shib)
- Tomcat Connector (mod\_jk)
- PHP (mod\_php)

- Shibboleth Target (SHAR)

- Dynamic Web Pages (PHP, Java, ...)

# Using access rules

# Static Authorization in Apache

## Rules in `httpd.conf` or `.htaccess` for Shibboleth Target 1.2.1

### Any AAI user

```
<Location /secure>  
AuthType shibboleth  
ShibRequireSession On  
require valid-user  
</Location>
```

### One specific user

```
<Location /restricted>  
AuthType shibboleth  
ShibRequireSession On  
require uniqueID 314592@aatest.switch.ch  
</Location>
```

### All students without VHO

```
<Location /secure>  
AuthType shibboleth  
ShibRequireSession On  
require affiliation student  
require homeOrganizationType ~ ^[^\vV][^\hH][^\oO]  
</Location>
```

Reference: <http://www.switch.ch/aai/docs/shibboleth/internet2/1.2/deploy-guide-target1.2.1.html#4.d>.

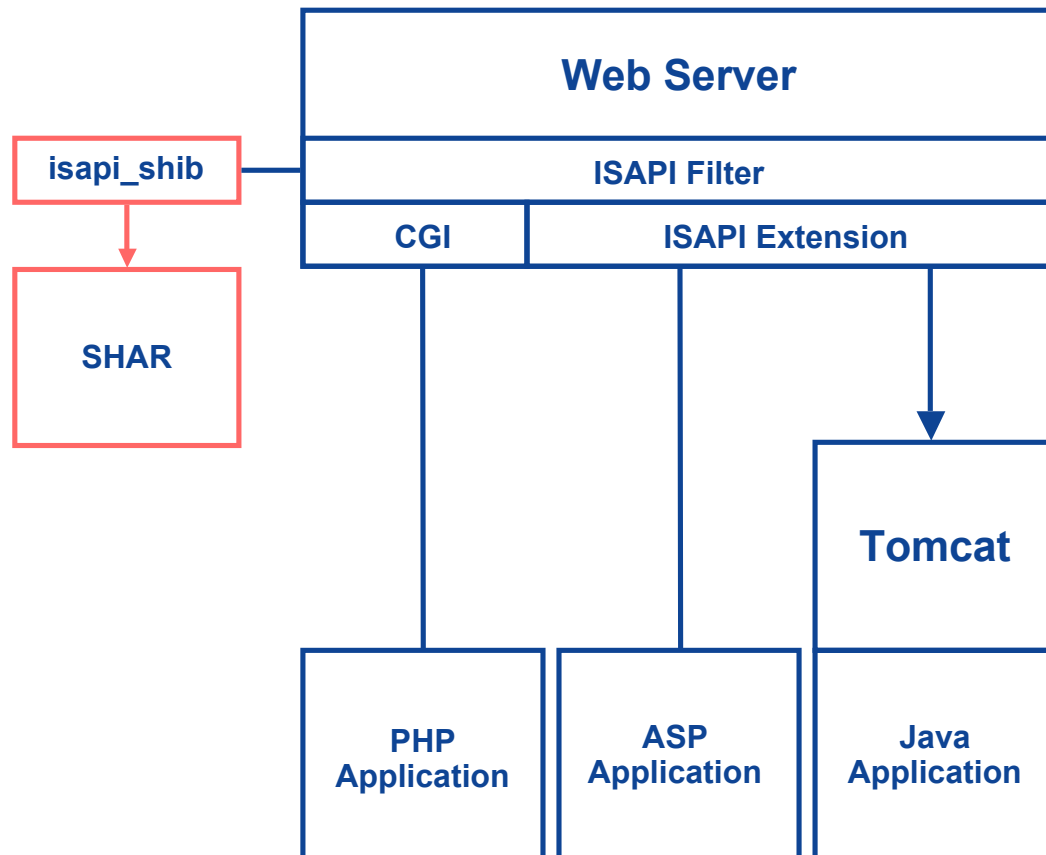

# SWITCH

The Swiss Education & Research Network

## Authorization with IIS

Patrik Schnellmann, <[schnellmann@switch.ch](mailto:schnellmann@switch.ch)>

- IIS Web Server
- Shibboleth Target (isapi\_shib)
- Shibboleth Target (SHAR)
- Tomcat via JK (isapi redirector)
- Dynamic Web Pages (ASP, Java, PHP, ...)

# Configuring Access Rules in IIS

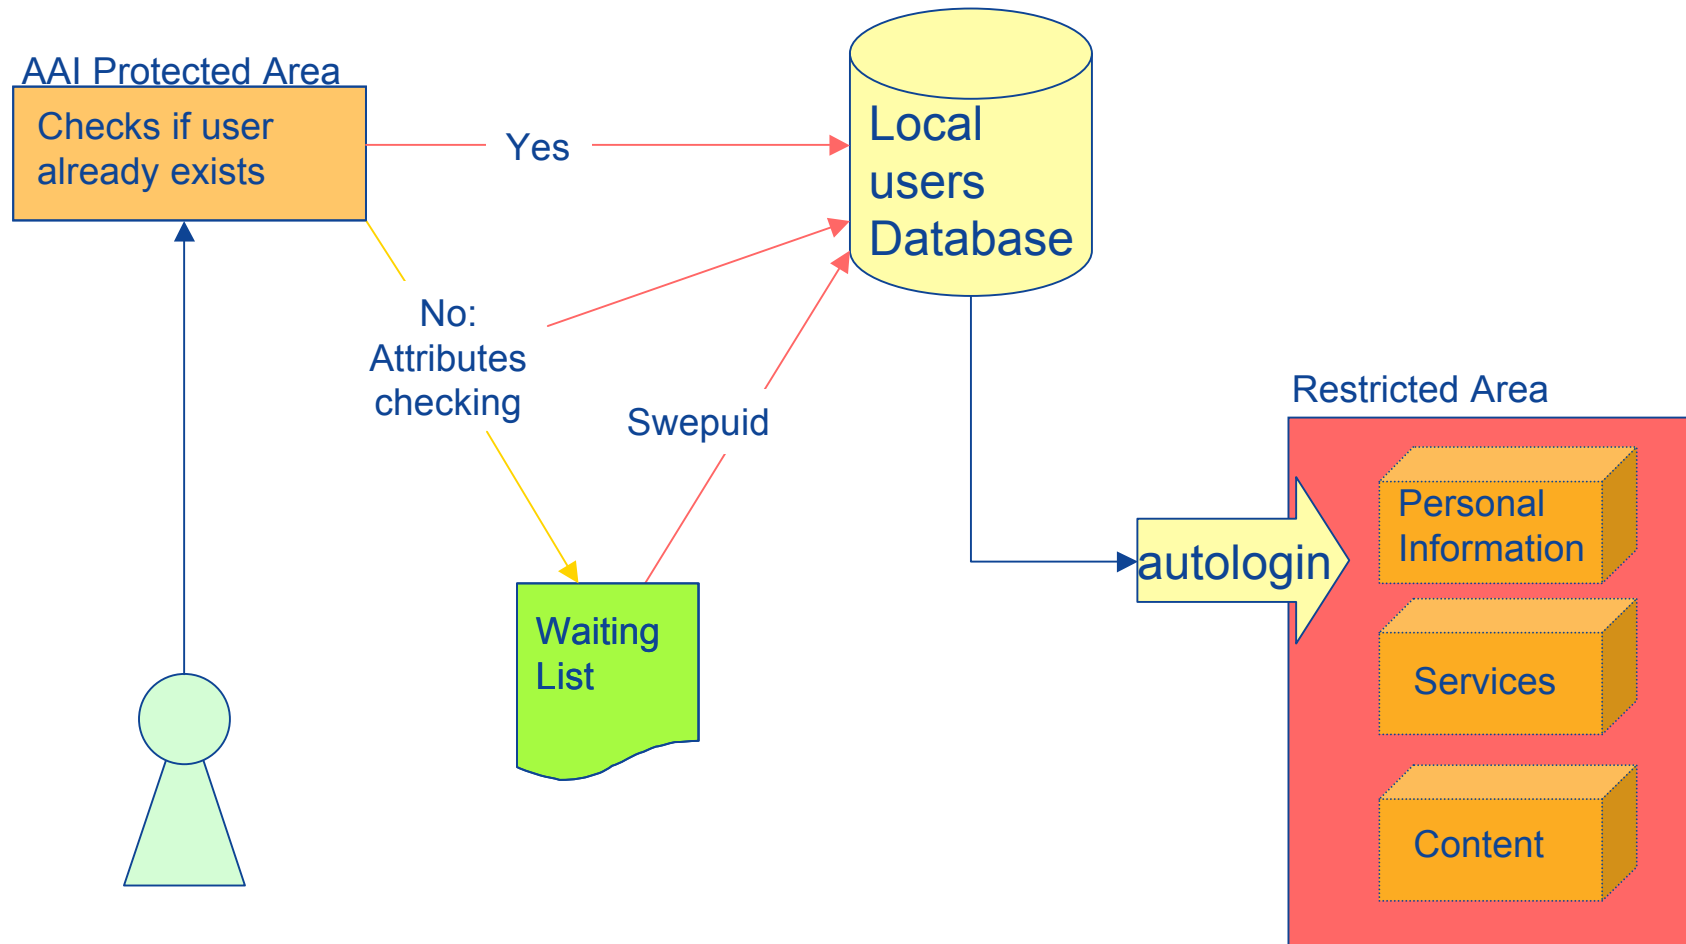

## Rules in `shibboleth.xml` for Shibboleth Target 1.2.1

```
...  
<RequestMap applicationId="default">  
  <Host name="some.host.ch">  
    <Path name="secure"  
      requireSession="true"  
      exportAssertion="false">  
    </Path>  
  </Host>  
</RequestMap>
```

...

- ⇒ `isapi_shib` filter forces Shibboleth authentication on requests for files in `http://some.host.ch/secure/`
- ⇒ equivalent to setting “require valid-user” in Apache
